

TransdatiX for IT

- You are a developer and would like to realize interfaces for your clients or products that are easy to maintenance?
- You are sick of re-programing the same processes again and again?
- Would you like to test interfaces already during construction?

«TransdatiX is at its best where businesses have to communicate electronically using a variety of applications – almost everywhere in fact. Even within a single corporation universal solutions are still rare. By developing data interfaces respectively by generating simple data mirrors from a variety of systems with TransdatiX, our clients like eaf are able to react, as service providers, flexibly to client needs.»

Robert Brockbals
Account Manager at SIEVERS-SNC

We have integrated into the TransdatiX environment all tools necessary to create a high-grade interface and its intelligent structure allows you to re-use objects developed before, thus drastically reducing your expenditures for developing interfaces.

TransdatiX.Designer has been designed for

- developing businesses and ERP providers who would like to offer their clients an unlimited number of interfaces within their own software
- service providers whose clients repeatedly need a variety of interfaces
- enterprises with an IT unit of their own that handles internal transformation projects e.g. by data migration or data alignment.

Use TransdatiX.Designer to develop any EDI or XML-based data transformation. Just create interfaces between the systems of your choice to safeguard transparent data adaption. There are virtually no limits to the scope of application. No matter whether you are a developer, a service provider or an IT counselor, TransdatiX.Designer will considerably relieve you following a brief introductory period. Even more so, TransdatiX.Designer warrants optimum performance of your solution.

Use a wide variety of technology constituents with TransdatiX.Designer in order to smoothly integrate them into more complex transformation and migration processes.
