

## TransdatiX For Logistics

- Are you closely cooperating with logistics partners who are forwarding your products, like Federal Railways or large haulage agencies?
- Would you like to automate communication processes with your logistics partners?

### Available Interfaces (excerpt)

Business Partner	File Type / Format
	addresses
Dachser	bills of quantities/construction industry (ÖNORM B2063)
Feratel	order confirmations
Lagermax	orders
LBS	entries/accounting
Nagel	delivery confirmations
ÖBB	delivery slips (DESADV)
Routex	truck routing data
Siemens	income tax data
Sony	invoices
T-Mobile	refuelment data
	haulage order data (IFTMIN)
	telecom expenses
	event data
	commissioning data of goods

«We quickly realized the various opportunities TransdatiX provides us with. Implementing the hogast interface was a lot cheaper than offered by another vendor, who already knew our environment from the previous Metro implementation. At Morandell TransdatiX has ever since established itself as the one and only product for interfaces, data transformations and data exchange. It always provides the most cost efficient way to implement such solutions.»

Johann Kaufmann  
IT Manager, Morandell International GmbH

Only one of the benefits of using TransdatiX is fast and reliable electronic haulage order data based upon EDIFACT format. Also eliminate error sources, speed up administration and reduce your HR costs grace to an effective communication, without human interception, of data such as article master, prices, client base, client conditions, order data and invoice data.

Next to optimizing your communication with logistics partners TransdatiX will – as a “side effect” – simplify your internal work flows.

Here are some examples:

- Create and print self-adhesive bar code labels.
- Generate a printable HTML-format freight list for each delivery.
- Automatically change status of the delivery in your own applications.

All this does not require more than an extra mouse click during commissioning.
